Facility Rating – Active & Passive Trending Charts!

Complimenting the **Facility Rating Trending Chart** in depicting the total **Active, Passive and Total Scores** with up to a 10-year comparison, now available are two new charts/reports detailing the categories for the Active and Passive segments of the rating.

These two new charts/reports have been developed in the same interactive web form style where you can click directly on any of the data points to review the full Facility Rating for that location and year.

These are available for both Fire and Boiler & Machinery Facility Ratings found under the **Charts & Reports** and **Facility Rating** menus.

Active Trending Chart provides a 10-year comparison of the individual **Active** category ratings for **Protection, Human Element, Natural Hazard Protection** and **Business Continuity Planning**.

Passive Trending Chart provides a 10-year comparison of the individual **Passive** category ratings for **Flood, Earthquake, Windstorm, Construction, Occupancy** and **Other Exposure**.
